

REVOLUTIONIZING CONSTRUCTION: THE POWER OF BIM FOR SMARTER PROJECTS

In recent years, the construction industry has witnessed a significant transformation with the introduction of Building Information Modeling (BIM). Building Information Modeling (BIM) is rapidly becoming an essential tool in the construction industry, transforming how projects are designed, planned, and executed. This innovative digital process allows for the creation of detailed 3D models that represent both the physical and functional aspects of a building, offering a more efficient way to manage every stage of construction. By integrating all project data into a single model, BIM

enhances collaboration and communication among stakeholders, making it easier to stay aligned throughout the project lifecycle. One of the main benefits of BIM is improved collaboration. With everyone working from the same up-to-date model, architects, engineers, contractors, and owners can easily communicate and make decisions together, minimizing misunderstandings and reducing the risk of errors. This leads to fewer delays and smoother project execution. Another significant advantage of BIM is cost and time savings. By detecting design clashes early in the process, BIM helps avoid costly errors and rework during construction. With better planning and resource management, projects are completed more efficiently, saving both time and money. Beyond construction, BIM proves valuable for lifecycle management. The model created during the design phase can be used throughout the building's life for maintenance, renovations, and operations, making it an indispensable tool for long-term facility management. As more companies adopt this technology, we can expect even more streamlined project delivery, reduced costs, and faster completion times.

MANAGER DE PROIECT ÎN CONSTRUCȚII

Alexandru Samoila
Managing Director
@ Vitalis Consulting

12 lecții | 6 săptămâni

- 01 Definiții, concepte, principii
- 02 Locație, amplasament, condiționări
- 03 Proiectare
- 04 Autorizare
- 05 Planificare
- 06 Bugetare & Fezabilitate
- 07 Ofertare & cost management
- 08 Contractul de execuție
