

**NEW 3,500 SQM INDOOR ENTERTAINMENT FACILITY UNDER CONSTRUCTION**

The beginning of the year brings new momentum to the leisure and entertainment sector in Western Romania, with significant investments shaping modern destinations designed for active recreation and social experiences. Large-scale indoor facilities continue to gain popularity, reflecting a growing demand for high-quality environments that combine innovation, safety, and engaging design.

In this context, Vitalis Consulting PM started in February the site supervision services for a new indoor entertainment and play facility currently under development in Timișoara. The project spans approximately 3,500 square meters and is set to become a major leisure attraction in the region, offering a dynamic mix of activity areas and complementary functions within a carefully coordinated layout.

Our scope of services covers full site supervision throughout the construction phase. The team ensures that all works are carried out in accordance with the approved technical documentation, quality standards, and project timeline. By maintaining a constant on-site presence, we monitor progress, verify compliance with safety and regulatory requirements, and facilitate effective collaboration between contractors, designers, and suppliers.

Through this new engagement, Vitalis Consulting PM continues to consolidate its experience in supervising large-scale commercial and leisure projects, reinforcing our commitment to delivering quality, control, and reliability at every stage of project implementation.
