

SUPPORTING THE NEXT GENERATION OF RENEWABLE ENERGY PROJECTS IN ROMANIA

As Romania continues to expand its renewable energy infrastructure, Vitalis Consulting PM is actively involved in the coordination and delivery of several large-scale photovoltaic, energy storage and wind power projects across the country. Our current portfolio includes utility-scale solar parks developed together with Battery Energy Storage Systems (BESS), a technology that is becoming increasingly important for improving grid stability and supporting the efficient integration of renewable energy into the national network.

The projects currently under development include photovoltaic parks in Mehedinți, Olt, Satu Mare and Galați counties, with installed solar capacities ranging from 1 MW to over 120 MW, as well as large-scale storage systems exceeding 100 MWh. These projects require close coordination between construction teams, electrical contractors, designers and safety specialists throughout all execution phases.

In parallel, Vitalis Consulting PM has successfully contributed to the completion of multiple photovoltaic and electrical infrastructure projects, including solar parks in Prahova and Buzău, a 220/33kV transformer station connected to a 135 MW photovoltaic power plant, and a wind power plant with seven turbines and a total installed capacity of 38.4 MW.

Within these projects, our team has provided services such as Project Management, Site Management, Site Inspection, Project Monitoring and Health & Safety coordination, supporting both operational execution and on-site compliance requirements. Through our involvement in renewable energy developments of increasing scale and complexity, we continue to strengthen our experience in delivering energy infrastructure projects across Romania.

KEEP IN TOUCH WITH US!

Honored. Grateful. Motivated for what's next.
We are proud to announce that Vitalis Consulting PM has been awarded Best Project Management Company at the HOF Awards.
